

— MAINTENANCE INSTRUCTIONS FOR TECHNICAL COATED TEXTILES —

CLEANING

INITIAL SITE CLEANING: An initial cleaning is always carried out before using the new material. Always protect the surrounding materials with Marvel's PVC Sheet or equivalent at the time of installation. Use a neutral detergent, pH 7-9 with water to make a foamy solution to wipe clean.

DAILY CLEANING: Daily cleaning is not required, but if you must, we recommend wiping clean with a damp cloth dipped in warm water. Ensure that the cloth is just moist and not wet.

CLEANING WITH CHEMICALS: If wet-cleaning is necessary, use a neutral cleaner. Remove residual lime and soap with water
Warning: Always follow dosage instructions carefully!

MACHINE CLEANING: Machine cleaning or buffing is not required

REMOVING MARKS AND STAINS: Treat marks and stains immediately. Use methylated spirits, cleaning spirit or neutral detergent. Wipe afterwards with clean water. *Warning: This is only applicable to stain resistant Technical Coated Textiles*

GENERAL ADVICE:

- Technical Coated Textiles are damaged by solvents
- Wipe up any spill oil immediately because it may damage the surface.
- Remember that light colours need to be cleaned more frequently.
